

Bowker. 1634.

**A New Almanacke, and
Prognostication for the
yeare of our Lord God.**

1634.

Being the second from Leape yeare.

Wherein besides the generall state of
the yeare, is particularly set downe
the daily disposition and inclination of
the Ayre, together with the time of
great Coniunctions, Aspects, &c.
and the *Moones* Eclipse.

Rectified and calculated exactly for
the Meridian of the honourable City of
London: But will serue without sensible
errour the whole Kingdome of

Great Brittain.

Authors *I. B. Philophyico Mathematico Medico.*

*Vbi Cœlestia negliguntur, ibi terrestria pa-
rum prosperè succedunt.*

Præneq; Deneq; Poneq; Boneq; Moneq; Pleauē

To know the time of Full Sea, in the Hauens here vnder mentioned.

First ouer against the day of the moneth finde the age of the Moone in the first Colunne of the Almanacke, and with that age returne to the Table before the figure of the Moones Eclipse, and descend with your eye downe-wards on the left hand you shall finde the name of the place you seeke for, with the number wherewith that place standeth, & in the common Angle where those two meete, (viz:) the age of the Moone, and the name of the Hauens, you haue the houre in the vpper line, and the minutes past in the nether line of the time of Full Sea there.

As for Example.

I desire to know the full Sea at London. The first day of January this Yeare 1634. I finde her age 11 dayes which 11 I finde in the head of the Table following, and right vnder it against London, I finde 11 houres. 48 minutes. Therefore I conclude, it is full Sea at London, the first day of January, 48 minutes past 11 of the clocke: And for as much as I finde London, to stand heere in the line numbered with 5. I say it is high water at the same time at London, Timmouth, Hartlepoole, Amsterdam, Gascoigne, Britaine. And in like manner euery line hath for all the Hauens therein named, the same time that the first Hauens in the same line hath.

The names of the Hauens.

1. Quinborough, Southampton, Portsmouth, Wellins, the Spits, Fland. Landsend.
2. Aberdeen, Redban, Rochester, Maldon, West-end of Nore.
3. Grauesend, Downes, Romney, Tenet, Ramkins.
4. Dundee, St. Andrewes, Lisbon, Silly, Maze, S. Lucas Spaine.
5. London, Timmouth, Hartle-poole, Amsterdam, Gascoigne, Brittain
6. Barwick, Ostend, Searborough, Fount, Flamborough, Flushing, Blankenb.
7. Prith, Lieth, Dunbar, Lawre, Bloy, Monst, Egmon.
8. Falmouth, Foy, Gamesey, Severne-mouth, Tinby, Torbay, Kinsale, Lizar, Waterford, Mallom.
9. Lin. Humber, Waymouth, Plimmouth, Antwerpe, Beaurd, Dortmo.
10. Bristol, Lanion, Poulness.
11. Milford, Bridgwater, North-coast, Tazel, Exwater.
12. Portland, Peter-port, Haresflew, the Hague, Blanch, Sherb.
13. Orkney Poole, Orwell, S. Hellen, Flee, Hames, Embden.
14. Needles, Deepe, Gasket, Lux, Lenow, Orford, Laysto.
15. Yarmouth, Bullen, Douer, Harwich, Wight.

A very easie Table to know the time of full Sea.

The age of the Moon.	{	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30

Vpon the fourth day of *March* this year being *Tuesday* in the night, thus shall the Moone be darkened or eclipsed, & appeare to us of a black colour mixed red. This is the true position of the heavens (as the figure sheweth) at the middle time of the Eclipse or greatest obscuritie, which wilbe at 37 min. past 8 of the clock in the night. The beginning wilbe at 48 mi. past 6. The end wilbe 24 min. past 10 of the clock: So that from the beginning to the end wilbe 3 houres 36 min. The parts darkened wilbe 11 and somewhat more. Touching the influence and effects of this *Lunar Eclipse*, I referre you to the *Astrologica* Iudgements in my *Prognostication*; Onely let me borrow thus much of *Lucan* in his first Booke.

The first Columne of the Almanacke containeth the daies of the Moneth. The second, the dayes of the weeke. The third, Svs. dayes, beginning and end of Tearmes, places of the Planets, &c. The fourth is the signe and degree the Moone is in at noone. The fift, is the age of the Moone with the day of the Change, Full, and Quarters. The new Moone being noted thus ☉, The full Moone thus ☾. The first Quarter thus ☾, And the last Quarter ☾. The sixt Columne is the time of Sun rising. And the two last are the beyond Sea accompt.

January hath xxvj. dayes.

Saturne orientall the 15 day at 7 at night. Iupiter occidentall with Luna the first day at 4 After-noon. And the 28 day at 6 at night: mars orientall with Luna the 9 day at 7 at night. Venus orientall with Luna the 17 day at noon. The same day Mercury is with Luna at midnight. Venus and mercury in coniunction the 23 day at 4 in the morning. And may be seene by carely risers.

The Moone at full, *Venus* and *Mars* in square,
Th's strange! they bid thee now to haue a care
Thou flee contention; and lewd women shun,
For by those meanes are many men vndone.
This Moneth hard frosts, much snow, and cold will proue
Then why should men so hotly, madly loue?

February hath xxviii. dayes.

Time wheelles about, preparing to oppose
Him that is led by Eagles: fiery Mars,
And glorious Sol are now (as alwayes) foes.
These will not part without some words of warres,
And now me thinks I heare some talke of stormes,
Of bitter tempests, or of worser harmes.

Aspects disastrous! Squares and oppositions,
Of the more greater Planets with the lesse
For halfe this moneth: These shew mens dispositions
Are froward as the Ayre is, if I guesse
Aright: The Moone's eclipsed, and Mars is neere her,
Let vs serue God, and then what need we feare her?

The Heavens are plausible, send fruitfull showers
Which glads our hearts: The earth's adorn'd with flowers
The *Wand'ers* symbolize by friendly *Trine*,
Of happines, this is a hopefull signe.
This onely wanteth, that the *Microcosme*
Is not cohering as the *Megacosme*.

May hath xxxj. dayes.

The various aspects in each *May* Scheame,
Of cold and hot with inequalities:
Blacke *Saturne* darkning the more brighter beame
Of *Sol* and *Venus*. 'Tis a qualitie
That's incident to ill: just quite contrary
To good; Thus heavens still change the times to vary.

July hath xxxj. dayes.

Phæbus and *Mars* each Quarter of the Moone,
Shew forth their heate by their dominion:

Hermes and *Iove* sometimes participate,
Raising such windes as often suffocate.

Thus hath man learned by deepe speculation,
Of times and seasons the subalternation.

August hath xxxj. dayes.

The roaring Lyon, and the dog-stars heate
 Doth terminate this moneth, coole winds abate
 Their furie: In the weeke of *Bartholmew*
 Some worser weather's likely to ensue;
 For when the Moone's at full, shee straight way hies
 To *Saturnes* Square, and darkens all the skyes.

September hath xxx. dayes.

The Lordship of this moneth is almost left
To *Mercury*, inconstant, windy, dry,
Mars hath a part. These two are given to theft,
And cause diseases that will mortifie.
Then shut your doores the former to prevent,
The latter bids take Physicke, and repent.

October hath xxxj. dayes.

The 15 and 16 dayes the Moone passeth vnder Venus, Mars, & Saturne, & may be seen in the West after Sun-setting. The Moone is a little aboute Iupiter and the Aselli the 4 day at 8 at night, but they are seene by early risers the same day in the South. Mercury cannot bee seene all this moneth. Saturne and Mars are together the 17 day. Saturne & Venus the 18 day. And Mars & Venus the 21 day. All in the West.

October hath xxxj, dayes.

Saturne and Mars haue a disastrous plot,
 How to take lustfull Venus, shee will not
 Be long detained by them ; what these meane,
 Will suddenly appeare by snow and raine :
 That is not all ; ther's something else beside,
 Erewhile was mention'd will this moneth betide.

November hath xxx. dayes.

Though torpid *Saturne*, nimble *Mercury*,
Are got together, yet we need not feare
Their tempests: Onely shun slie treacherie
That they are working 'gainst this lower Spheare.
The Ayre hath various shāpes, and changeth oft,
Yet is it most part faire, with windes aloft.

December hath xxxj. dayes.

Saturne is not to be seen all this month, for the 5 day he is with Sol, and then beginneth to be orientall. The 11, 12, & 13 dayes the moon passeth from Mercury to Mars, and then to Venus. In which space viz. the 12 day at 6 in the After-noon, is the opposition of Iupiter & Mars. Vpon Christmas day at 8 a clocke at night Luna and Iupiter rise neere together.

December hath xxxj. dayes.

*Iove Mars opposing, Sol and Saturne close,
 Prenunciate much snow, fierce winds, hard frost:
 And often-times strange portents doe disclose,
 When Heavens are angry, mortalls are agast.
 The Starres rule vs, but G O D doth them command,
 If wee serue him, wee shall their power with-stand.*

Note that these two letters A & P put after the conjunction and Aspects of the planets shewe the time before or after noone. A standing for *Ante* or before noone, and P for *Post* or after noone, As for example the first of Janua-

ry I finde these characters. $\odot \Upsilon \Delta 4 p.$ That is to say a conjunction of Iupiter & the Moone at 4 a clock after noone. Likewise $\odot \text{♀} \Delta 6 p.$ which is an opposition of Venus and the Moone at 6 a clock at night, Also $\square \text{♂} \text{☾} 12 p.$ A quartile of Mars & the Moone at 12 a clocke after noone, or midnight obserue this order with the rest.

CORONIDIS VICE.

NOW haue I finished my labours with the yeare; I need not to apologize, seing in those things which are subiect to sense, the most quicke sighted naturalists are oftymes deceiued, And indeed *Omnis fere humana scientia est mutila & imperfecta*. It is no wonder then if our knowledge in the starres be obfuscated, considering their infinite distance from vs. I haue and doe daily obserue among our Ephemerides Masters, such and so much disparity in their calculations, That the Sciolists in this science relying on them are put hard to it and their credit at stake which deserueth to bee crackt, rather than the least blemish should bee impured to this so noble a science. Yet haue wee many illiterate hare-braines, that haue scarce learned the ABC of Astronomie, who if they know, but the Characters of the planets, and perhaps can attaine to erect a figure, will impudently diunlge their simple Annuall prognosticks. The errors whereof and the misinterpretation of some as wise as themselves hath brought a scandall vpon the art and the more able professors thereof, I deny not but the weather falleth out many times contrary to prediction. The Physician doth not alwayes cure, The Logician proue, nor the Oratour alwayes perswade. *Humanum est errare*. It is sufficient for an Artist though hee attaine not the end, alwayes to performe so much as the rules of Art require which our common Almanack-writers neuer doe. There haue beene for diuerse yeares many wants, whereupon errors must needs ensue, both in calculating Reuolutions, Lunations, and Eccleses, One minute in the Suns plate begetteth 24. minutes of time, And the motion of the Moone as yet not so exact as is wished. And therefore figures erected, For these erronious times, It is not possible but that errors must needs follow, But this in part is supplied

plied by the incomparable labours of the (late) *Ties noble*
Ticho Brabe. But this is not all, Our vnskilfull and weake
vnderstanding, in these inferiour elements of the earth
and the aire, and our rash Iudgements are to be pardoned.
The windes are to bee regarded agreeing to the season of
the yeare, sith they blow not alike in all places some being
topicall, others tronicall, euery hill, valley, Creeke and
Elbow of Land hath its particular winde. And the diuerse
situation of the ground, Northward or Southward, Cham-
pion valley, or hill, neere the Sea or great fresh Riuer
will alter the state of the aire in those places and cause it to
put on a diuerse *Metamorphosis* as the vnkowne power of
the windes by their irregular motion driue the Clouds
now hither now thither, by which meanes it droppeth of-
ten in one place, when in the bording places and parts
that adioine it is found cleere at the same time: I have
knowne it likewise and that very often when it snowed on
the moores and high mountaines it hath rained on the
plaines and valleis, And yet no preiudice to the Art or Ar-
tist. And also generall Influences proceeding from an vni-
uersall cause doe ouerrule the more particular. And God
sometimes hath a secret purpose to his diuine wisdom
knowne farre beyond mans capacity, for hee causeth it to
raine on one Citty and not on another *Amos chap. 4. vers. 7.*
Therefore when we haue searched as far as we can we must
conclude with the Apostle *S. Paul Rom. 11 cap. vers. 33. 34.*
Oh the deepnes of the riches both of the wisdom and
knowledge of God how vnsearchable are his wayes and his
Iudgements past finding out. For who hath knowne the
münd of the Lord or who was his Counsellour.

*Non stultis, aut superbis, & inflatis Ani-
mis hæc scripta sunt quæ hic enumerantur, sed
ijs quorum sapientia simplex est non iuncta cum
aliqua malitia.*

Till the next yeare
Farewell.
